SAP System Health Check

SUMMARY REPORT - WITHOUT SCREENSHOTS

Demonstration only: Fictional system DEMO / client 100. Sample review period: 01 Oct 2026. This is a reporting-format example, not an assessment of a real SAP system.

CHECK AREA	ILLUSTRATIVE OBSERVATION	STATUS
System availability	No exception in illustrated instance status.	No finding
Background jobs	1 cancelled job; 2 jobs exceed the 30-minute example threshold.	Review / F-01
ABAP dumps	3 dump records in the sample reporting period.	Review / F-02
System logs	Logs not included in the demonstration dataset.	Not collected
Locks	No persistent lock in the illustrated sample.	No finding
Spool	Spool evidence not included in the demonstration dataset.	Not collected
HANA health	No exception in illustrated service and backup status.	No finding
Filesystem capacity	Example /sapmnt usage: 82%; example review threshold: 80%.	Review / F-03
Connectivity	No failed destination in the illustrated sample.	No finding
Monitoring	Alert coverage not assessed in this example.	Not collected

Findings and proposed follow-up

F-01 / Jobs: Inspect the cancelled-job log and compare runtime exceptions with workload and historical duration. Do not treat duration alone as a fault.
F-02 / Dumps: Review dump types, timestamps and business impact before assigning root cause.
F-03 / Capacity: Review growth and approved housekeeping options; avoid deleting files without checking retention and ownership.

Reporting and validation notes

"No finding" applies only to the illustrated observations. "Not collected" does not mean healthy. Actual delivery would include agreed scope, authorised evidence, owners and post-action validation notes.

No changes were executed and no live SAP results are claimed in this sample.
